PROFESSIONAL SUMMARY

Computer and Systems Engineering student (Al-Azhar University, graduating 2028) seeking a Backend / Full-Stack internship to apply hands-on Python and Django skills in a real engineering environment. Built and deployed 2 production-grade systems (e-commerce and EdTech) covering 25+ routes, role-based access control, and live analytics dashboards. Strong grasp of layered (MVT) architecture, REST API design, and normalized database design. Completed 120 hours of intensive full-stack training at ITI. Fast learner who collaborates effectively in Git-based team workflows and is eager to grow under senior engineering guidance.

TECHNICAL SKILLS

- **Backend:** Python, Django, Django REST Framework, Flask, REST API Design, MVC/MVT Architecture, Authentication & RBAC
- **Databases:** PostgreSQL, SQLite, Schema Design & Normalization, Query Optimization
- **Frontend:** JavaScript (ES6+), HTML5, CSS3, Bootstrap 5, Tailwind CSS, AJAX
- **DevOps & Tools:** Git, GitHub, Docker, Postman, PythonAnywhere
- **Languages:** Python, Java, JavaScript, SQL

EDUCATION

B.Sc. in Computer and Systems Engineering - Al-Azhar University, Cairo 2023 - 2028 (Junior, 3rd Year)

EXPERIENCE

Full-Stack Web Development Trainee - Information Technology Institute (ITI), Cairo Jul 2025 - Aug 2025

- Completed 120 hours of intensive full-stack training covering backend architecture, REST APIs, and deployment workflows.
- Shipped backend features in Django/Python across 3 team projects, working in agile, Git-based sprints.
- Engineered normalized PostgreSQL/SQLite schemas and applied REST + MVT design patterns to reduce data redundancy.
- Delivered responsive, mobile-first UIs (HTML5/CSS3/JS), cutting cross-device layout bugs reported in QA.

PROJECTS

Teryaq - Pharmacy Management System | Django 5.2, Python 3.13, SQLite, Tailwind CSS, Chart.js, AJAX, Git, Docker

Live Demo: teryaq.pythonanywhere.com | GitHub: github.com/MohamedAymn220/Teryaq-Pharmacy-System

- Architected an e-commerce-style pharmacy platform with 25+ RESTful routes across catalog, cart, checkout, and admin layers.
- Designed a normalized relational schema (Medicine, Order, OrderItem, Payment, Cart) supporting full order lifecycle tracking.
- Built a role-based admin dashboard with CRUD operations and live income analytics, visualized via Chart.js.
- Implemented AJAX-driven live search and a session-based cart, cutting perceived page-load latency by ~30%.
- Tested 25+ API endpoints with Postman and containerized the app with Docker for consistent, reproducible deployment to PythonAnywhere.
- Showcased the system at the AZEX Engineering Exhibition (2026), demonstrating its production-readiness to evaluating panels

LearnUp Educational Platform | Python, Django, SQLite, Bootstrap 5, Git (ITI Capstone Project)

- Co-built an EdTech platform (4-person team) supporting course catalog browsing and student enrollment.
- Designed relational models and authentication flows with Django ORM, covering registration through enrollment.
- Delivered fully responsive UI (HTML5/CSS3/Bootstrap 5), verified across desktop and mobile breakpoints.
- Drove Git-based collaboration: feature branching, pull requests, and peer code review across the team.
